Sateh Green

Rooftop gardens for Beirut · Company Profile · Fictional business created for EECE 503P/798S

1. Who we are

Sateh Green (*sateh* means "rooftop" in Arabic) is a Beirut-based garden studio founded in 2021. We design, build and maintain rooftop and balcony gardens that grow food, give shade and stay alive through Lebanon's summers and power cuts. We have completed more than 140 rooftop and balcony gardens.

Studio & showroom: Mar Mikhael, Beirut. **Hours:** Monday to Saturday, 9:00 to 18:00 (closed Sundays). **Service area:** Greater Beirut, the Metn, and Kesrouan up to Jounieh. Projects outside this area are considered case by case after a phone call.

2. Mission

To turn every unused Beirut rooftop into a small source of food, shade and calm, using native Lebanese plants and irrigation that keeps working when the electricity does not.

3. Services and pricing (USD)

Service	What you get	Price
Starter Terrace	Design & build up to 15 m2: raised beds, solar drip irrigation, 20+ plants, Harvest Guarantee	$1,450
Family Rooftop	Design & build 15-40 m2: beds, pergola shade, seating corner, solar drip irrigation	$3,900
Building Commons	Shared rooftop over 40 m2 for a whole building; includes a residents' kick-off workshop	Custom quote, from $8,500
Habaq Kit	12-plant vertical hydroponic tower for balconies	$289
Habaq Pro	36-plant hydroponic tower with solar-powered pump	$649
Care Basic	1 maintenance visit per month	$45 / month
Care Plus	2 visits per month + seasonal seedling swaps	$85 / month
Saturday Workshop	3-hour hands-on session at the Mar Mikhael studio	$25 / person
Public-school program	Gardening program for 2 public schools per month	Free
Corporate Green Roofs	Consulting and installation for offices, cafes and hotels	Quoted per project

Every design & build project starts with a **free site survey**. Installation takes **2 to 3 weeks** after the deposit.

4. How a project works

1. Free site survey: we visit, measure, photograph and discuss what you want to grow.
2. Load check: a licensed structural engineer confirms the roof can carry the garden.
3. Design proposal within 5 working days, with a fixed price.

4. 40% deposit to confirm; installation in 2 to 3 weeks.
5. Handover walkthrough and balance payment on completion.

5. Team

Rania Haddad, Co-founder & CEO. Landscape architect with ten years of experience in Mediterranean planting design. She designs every garden layout.

Karim Nassar, Co-founder & Head of Systems. Mechanical engineer who designed our solar drip-irrigation controller, which runs for up to three days without grid power.

Maya Khoury, Co-founder & Head of Community & Workshops. Agronomist who leads plant selection, the Saturday workshops and the public-school program.

The founders are supported by a crew of six installers and gardeners.

6. What makes us different

- **Engineer-checked:** every rooftop gets a structural load check before we build.
- **Power-cut proof:** solar drip irrigation keeps plants watered through outages.
- **Native and water-wise:** za'atar, sumac, sage, mint, fig, olive and other drought-tolerant Lebanese plants; systems are greywater-ready.
- **Harvest Guarantee:** if a Starter Terrace does not produce in its first growing season, we replant it for free.
- **Warranty:** 12 months on all irrigation hardware.

7. Payment and policies

We accept USD cash, credit/debit card and bank transfer. Projects require a 40% deposit, with the balance due on completion. Kits are paid in full at purchase and can be picked up at the studio or delivered within our service area for a flat $10. Care subscriptions can be cancelled with one month's notice.
